I'm okay, it was a sensor error

Today · 10:14

I've had a headache and fever since yesterday. Thermometer says 38.4. My neck feels a bit stiff too.

Thanks, Amara. A stiff neck with fever is something I want to check carefully. One question first:

Can you touch your chin to your chest without sharp pain?

Vitals I'm using · last 10 min

94 bpm **97%** SpO2 **38.4** °C

Yes, it's fine | It hurts a lot | Not sure

It hurts a lot. And bright light bothers my eyes.

URGENT · GO TO A&E NOW

Fever, severe neck stiffness and light sensitivity together can be signs of **meningitis**. This needs to be ruled out by a doctor today.

- Don't drive yourself
- Check for a rash that doesn't fade under a glass
- Bring your medication list

URGENT · LEVEL 4 OF 4

Go to an emergency department now

Based on fever 38.4 °C, severe neck stiffness and light sensitivity reported at 10:21 today.

Self-care | Pharmacist | Doctor | **Emergency**

Call emergency services

Lagos University Teaching Hospital
A&E open 24 h · 3.1 km · 9 min drive
Directions

What this could be

Meningitis	Must rule out
Viral illness (flu)	Possible
Migraine with fever	Less likely

These are possibilities, not a diagnosis. Only a clinician can confirm the cause.

Recommendations

1. Have someone drive you, or call an ambulance. Don't drive yourself.
2. Show staff this summary. It lists your symptoms, vitals and allergies (penicillin).
3. Don't take more paracetamol before you're seen. It can mask fever.

On the way, watch for

- A purple rash that doesn't fade when pressed with a glass
- Drowsiness or confusion
- Seizures or vomiting that won't stop

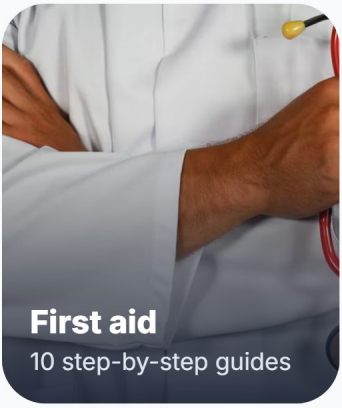

Chidi and Ngozi have been notified with your location.

LIFE-THREATENING

Adults & teens

CPR: hands-only

For someone who is unresponsive and not breathing normally. Keep going until help arrives.

110

Compression rhythm

100–120 per minute, 5–6 cm deep

Check for danger

Make sure the area is safe for you and the person.

Check for a response

Tap their shoulders and shout. No response and not breathing normally? Start CPR.

3

Call 112

Or have someone call. Ask them to find an AED (defibrillator).

4

Place your hands

Heel of one hand in the centre of the chest, other hand on top, fingers interlocked.

5

Push hard and fast

Arms straight, press down 5–6 cm, let the chest rise fully. 100–120 per minute.

6

Don't stop

Keep going until help takes over, an AED tells you to stop, or the person starts breathing.

CPR

Ibuprofen

Brands: Advil, Nurofen, Brufen · Source: FDA label, updated Aug 2026

Caution: you have asthma
NSAIDs can trigger wheezing in some people with asthma. Paracetamol is usually a safer first choice.

Adult dose	How often	Max a day
200–400 mg	Every 6–8 h	1,200 mg

Overview | Side effects | Interactions

Used for

Short-term relief of headache, toothache, period pain, muscle aches, minor arthritis pain and fever.

How to take it

- With food or milk to protect your stomach
- Use the lowest dose for the shortest time
- Don't take for more than 10 days without advice

Don't take with

Aspirin | Warfarin | Lisinopril | Other NSAIDs

High blood pressure in your 30s: what the latest research says

Reviewed by Dr. Adaeze Bello, MBBS
Cardiology · Updated 22 Oct 2026 · 7 min

KEY POINTS

- 1 in 4 adults aged 30–39 has raised blood pressure, and most don't know it.
- Readings above 130/80 at home on several days are worth discussing with a doctor.
- Salt, alcohol and sleep have the biggest effect you can control.

For years, high blood pressure was treated as a problem of later life. A 2026 analysis of 1.2 million adults now shows that pressure that creeps up in your thirties predicts heart disease two decades later, even when it stays below the classic 140/90 threshold.

Why it goes unnoticed

Raised blood pressure rarely causes symptoms. Headaches and nosebleeds are uncommon and usually only appear at very high levels. The only reliable way to know is to measure it, ideally at home, at the same time of day, for a week.

> **"Each 10 mmHg drop in systolic pressure cuts stroke risk by about a quarter."**

Common questions

Is VitaNet a replacement for a doctor?

No. VitaNet helps you decide how urgently to seek care and what to tell a clinician. It cannot diagnose. In an emergency, always call 112.

How accurate is the AI triage?

Who can see my health data?

How do I connect my smartwatch?

Can I use VitaNet for my child?

How do I delete my account?

Support hours: Mon–Sat, 8:00–20:00 WAT

About

VitaNet

Version 1.0.0 (build 42) · Up to date

VitaNet helps people decide when and where to get care. It combines a clinically guided AI assistant with your live vitals, so the advice fits you, not an average patient.

377	4	24/7
Symptoms modelled	Triage levels	Availability

- Medical disclaimer
- Privacy policy
- Terms of service
- Open-source licences

Built with clinicians in Lagos and Accra.

© 2026 VitaNet Health

Privacy policy

The short version

Your health data is yours. We encrypt it, never sell it, and never use it to train AI models.

Last updated 1 October 2026 · HIPAA and GDPR aligned

What we collect

Your profile, the symptoms you describe, files you upload, and vitals from devices you connect. Nothing from your phone is read without permission.

How we use it

Only to give you triage advice, reminders and insights. Anonymised, aggregated statistics may improve our clinical guidelines.

Who sees it

You, plus care circle contacts you approve. Urgent alerts share your location only at the moment they are sent.

How it is protected

AES-256 encryption at rest, TLS 1.3 in transit, and access logs reviewed weekly.

Your rights

Export or delete everything at any time from Settings. Deletion completes within 30 days.

Contact our data protection officer

Medical disclaimer

In an emergency, call 112

Chest pain, trouble breathing, heavy bleeding or loss of consciousness need emergency services, not an app.

VitaNet can

Suggest how urgently to seek care, explain results in plain language and help you prepare for appointments.

VitaNet cannot

Diagnose conditions, prescribe medicines, or replace an examination by a qualified clinician.

The information in this app is for general guidance only. AI responses may be incomplete or wrong, and vitals from consumer devices are not medical-grade. Always follow the advice of your doctor or pharmacist, and never delay seeking care because of something you read here.

Medicine information is sourced from FDA labelling and may differ from what is approved in your country. Check with a pharmacist before starting or stopping any medicine.
